Cambridge Waste Water Treatment Plant Relocation Project

A landscape-led approach, enabling sustainable growth and creating a place where water, people and nature can come together.

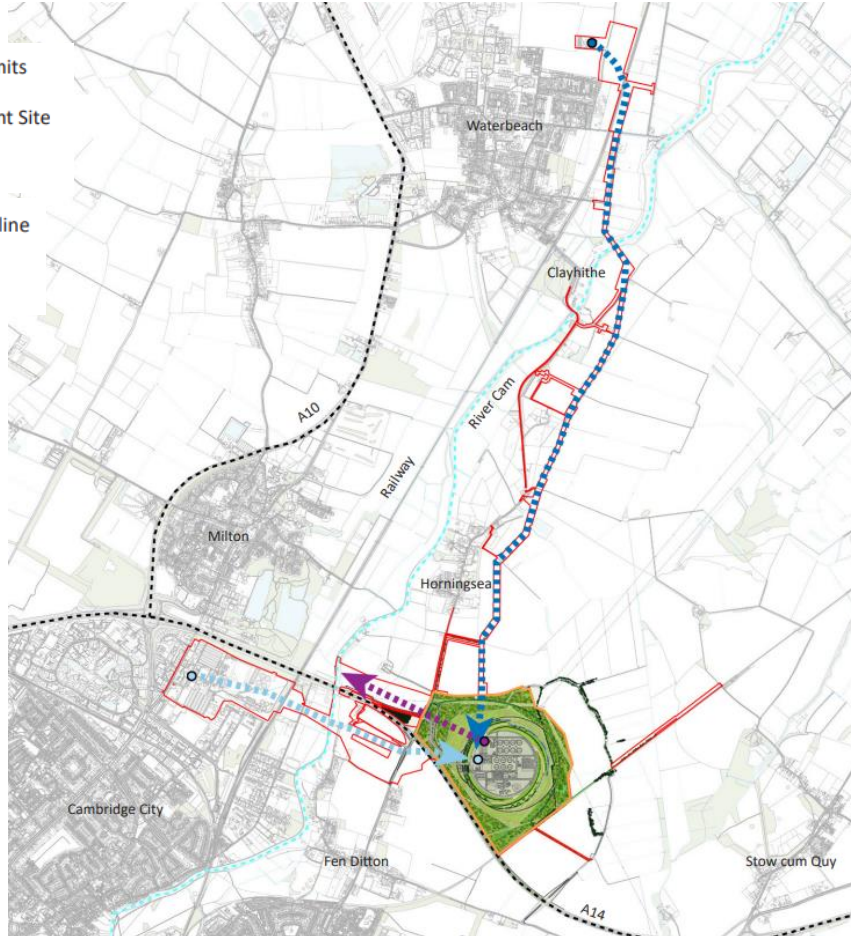

Why relocate?

The proposed development at a glance

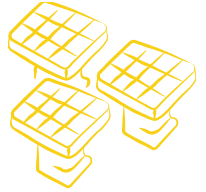

Key

- Scheme Order Limits
- Main Development Site
- Transfer Tunnel
- Waterbeach Pipeline
- Outfall Pipeline

Operationally **net zero** carbon, energy neutral and will target a **70 per cent reduction** in capital carbon.

Solar power generation to provide up to **7 gigawatt hours (GWh)** of clean electricity per year.

Designed to treat the waste water from a population equivalent of **300,000**

A **94 ha** site incorporating a **22 hectare** integrated waste water and sludge treatment plant.

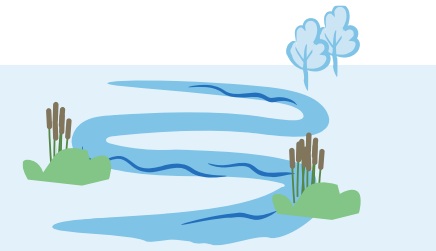

Proposals to plant over **1100** standard trees, **52000** young 'whip' native trees and shrubs, and over **5700** l.m. of native hedgerows.

Relocation will enable the delivery of a new, low carbon city district in North East Cambridge which could create **8,350 homes** and **15,000 jobs** over the next 20 years.

Ability to comfortably deliver a biodiversity net gain of **at least 20%** for both habitat and linear features.

• How are we communicating?

- **Letters and emails** - These will be sent frequently throughout the project to our customers directly affected by our works alongside the progress we make
- **SMS updates** – We send these for important and quick communications like reminders for anything Traffic related
- **Website updates** – We update this regularly and always when a new letter goes out
- **Face to face meetings** – face to face meetings to discuss impact and mitigation
- **Social posts** – Where possible we post online information
- **Press release** – We will share this good news story with local press
- **Door knocking** – The customer experience coordinator will regularly visit site and meet with residents

• Who?

- **Residents** - Bannold road customers re site compound set up and Horningsea Road – Musgrave Way residents for access when we are at that point crossing over.
- **Parish Councils**
- **Local businesses**
- **Highways**
- **Schools**

If you would like to discuss this work with us, please contact us at onealliancecustomers@anglianwater.co.uk

Traffic Movements

- There will be no impact on Horningsea village
- There will be a high volume of traffic and we have estimated 68 typical daily movements
- Deliveries to site will be between 09.30 – 15.00 Monday to Friday – this is to allow for peak traffic flows
- Reduced speed at Horningsea Road south of A14
- We do not have any road closures planned

Footpath Diversions

- We will put in place footpath diversions for safety and access when needed
